

Scott F. Jones, Ph.D., is an assistant professor of biology at the University of North Florida. Dr. Jones led data processing and descriptive updating of the nutrient and tributary sections of the 2023 State of the St. Johns River Report. With his lab group, he monitors UNF's home

watershed of Pablo Creek, and conducts coastal wetland research with collaborators throughout Northeast Florida and the US. Jones has led research projects over the last 10 years in Louisiana, California, and Florida. His research explores coastal and wetland ecosystems, with a particular focus on coastal resilience to global changes such as sea-level rise and salinity intrusion.
